

## NOTE XVII.

SYNONYMICAL REMARKS  
ABOUT MALLODON JEJUNUM, PASCOE.

BY

J. R. H. NEERVOORT van de POLL.

---

*Malldon jejunum* Pascoe (Journal of Entomology, II, 1864, p. 243) became some years afterwards the type of the genus *Brephilydia* Pascoe (Annals and Magazine of Natural History. 4th ser., vol. IV, 1871, pl. 13, fig. 6 & 6a); in the Munich Catalogue the genus *Brephilydia* is placed as a synonym of the genus *Macrotoma*, and the Australian *Brephilydia jejuna* Pascoe as a synonym of *Macrotoma jejuna* Klug from Madagascar! Finally Mr. Thomson established in the Revue et Magasin de Zoologie 1877, p. 277, upon Pascoe's *Malldon jejunum* a new genus *Blephylidia* (Pascoe Mss.).

NB. In the »Liste des Cérambycides" of Mr. Lameere, mention is made of a second species of the genus *Blephylidia* Thoms. viz. *Bl. Raffrayi* Thoms. l. c. p. 278, but this species has nothing to do with that genus, being the *Phyllocnema Raffrayi* Thoms. l. c.; at p. 35 of the »Liste" this species occurs also in the genus *Phyllocnema*.
